U.S. CITIZEN | DESIRED ROLE: REMOTE FULL-STACK ENGINEER / PRODUCT ENGINEER

PROFESSIONAL SUMMARY

Full-stack engineer and two-time founder who builds revenue-generating systems end-to-end: e-commerce with \$400k+ in lifetime sales, high-volume scraping and data-ingestion pipelines, and an SEC filings analysis platform with data-quality enforcement. Ships fast using Next.js, Node.js, and Python alongside AI-assisted engineering workflows; comfortable owning code, infrastructure, and customers, and experienced translating business requirements into working software.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, Next.js, React, Node.js, Python, PHP, C++, SQL (PostgreSQL, MySQL), HTML5, CSS3, Tailwind CSS

AI-Assisted Engineering: Cursor, Claude, OpenAI API, Prompt Engineering, Rapid Prototype Assembly

APIs, Scrapers & Data: Firecrawl, DataForSEO, SerpApi, SEC EDGAR / XBRL, RESTful APIs, Webhooks, Google APIs, Stripe, Square, JSON Parsing, Automated Cron Jobs

Ticketing & System Triage: Zendesk, Chrome DevTools, Root Cause Analysis, Issue Tracking

Tools & Infrastructure: Git, GitHub, Google Cloud Platform (GCP), Docker basics, Postman

PROFESSIONAL EXPERIENCE

guidedhunts.io | Founder & Lead Engineer *Remote | 2026 – Present*

- Architected and deployed a programmatic directory/aggregator platform (Next.js, Python), using AI-assisted engineering workflows to compress time-to-production.
- Engineered high-volume extraction pipelines (Firecrawl, DataForSEO) that processed 9,200+ target sites in concurrent batches during the company's first month.
- Built a SERP gap analyzer on SerpApi that maps target keywords to the page structures Google ranks — quota-aware caching, offline demo mode; live at serp.guidedhunts.io, source at github.com/MichaelPGifford/serp-gap-analyzer.
- Designed cost-optimized ingestion with response caching and quota budgeting for periodic data refreshes.

USCC, LLC | Founder & Lead Developer *Nashville, TN | 2021 – Present*

- Built and operate a production e-commerce platform (Node.js, JavaScript, SQL) that has generated \$400k+ in lifetime revenue since 2021 (peak year: \$111k).
- Engineered payment flows across wire, crypto settlement, and card processing — mainstream processors restrict the product category — while maintaining 99.9% uptime.
- Configured, tested, and maintain third-party API connections and webhook-driven transaction monitoring and automated flagging.

Rogers Building | Real Estate Operations Assistant *Nashville, TN | 2020 – 2026*

- Helped maintain a portfolio of ~30 commercial warehouses in downtown Nashville — coordinating and performing repairs across roofing, HVAC, plumbing, appliances, and building systems.
- Handled business operations: generated leases, advertised for tenants, tracked commercial compliance, and triaged tenant requests while managing vendor schedules to minimize downtime.

Takl | On-Demand Home Services | Technical Support Intern *Nashville, TN | May – Aug 2017*

- Owned the end-to-end technical support lifecycle in Zendesk: managing, troubleshooting, and resolving high-priority inbound platform tickets.
- Replicated user-reported database and integration bugs in staging using browser dev tools to isolate frontend/backend errors, producing diagnostic logs for DevOps hotfixes.

Transformation Media | Web Development & Integration Intern *Nashville, TN | Summer 2015*

- Engineered an interactive, client-facing JavaScript layout customization tool allowing users to modify complex structural configurations in real time.
- Deployed production-ready Stripe, Square, and PayPal payment-gateway integrations, validating automated webhooks and secure checkout workflows.

PROJECTS

- **AIStocks — SEC Fundamentals Research Platform:** Full-stack FastAPI + Next.js + Postgres system that ingests raw XBRL filings (10-K/10-Q) from SEC EDGAR into a point-in-time canonical data layer with reconciliation invariants, outlier tripwires, regression-tested ingestion, and a per-item adjustments audit trail; includes valuation and shareholder-yield analytics and honestly-reported strategy backtests. github.com/MichaelPGifford/AIStocks
- **Wywaste Asset Ingestion Pipeline (Smart City Hackathon — 1st Place):** Co-developed a real-time GPS tracking and data-ingestion pipeline for municipal waste management on GCP and the Google Maps API, tracking truck coordinates and triggering automated customer ETA notifications.
- **Speech-to-Text Glasses:** Assistive wearable that captures live audio, processes it through real-time speech-recognition APIs, and renders text on an embedded micro-OLED display.
- **Smart Slides:** Automated presentation tool using voice recognition and audio cues to trigger hands-free slide transitions.

EDUCATION

Bachelor of Science in Computer Science | University of Tennessee, Knoxville *Graduated 2020*
